hh2 Cloud Services Introduces Mark Bennett As Vice President Of Product

Bennett Brings 11 Years Of Construction Experience And Over 17 Years Of Construction Software Experience To hh2 Cloud Services As The Newest Vice President

SALT LAKE CITY, May 23, 2018 – hh2 Cloud Services, a cloud-based construction software development company located in Clearfield, Utah (www.hh2.com), is pleased to welcome Mark Bennett as the new Vice President of Product. In addition to his 17 years of experience in construction software, Bennett has worked with many of the top industry leaders in construction throughout his career.

"We are so proud to have Mark Bennett come to hh2," said Devon Dorrity, President and CEO of hh2 Cloud Services. "His depth of technical, accounting, customer knowledge and experience are unparalleled in the construction software industry."

Bennett began his career in his native country of England where he first started as a software developer for Ashton-Tate, a U.S. based software company. In 1986, he transferred to Ashton-Tate's R&D center in Glendale, California. Bennett moved to Portland in the late '80s looking for a new adventure where he started work in the construction industry. Within a short time, he decided to start his own painting business that later expanded into residential general contracting and remodeling. His hands-on experience in construction gives him crucial insights into the mindset of the ideal construction customer.

Bennett decided to get back into software in 2001 when his wife was expecting their child. He accepted a position at Timberline Software where he initially worked as a senior support analyst. Bennett became an expert in construction accounting, project management and understanding the needs of the customer. A few years after Sage acquired Timberline in 2003, Bennett's strong technical skills led to his promotion to senior integration manager for Sage Construction and Real Estate (CRE) where he played a critical role managing the technical side of the Developer Partner Program. His duties in that role included product managing the SDK / API's for four product lines, creating all SDK documentation and sample .net projects for each API. By 2013, Bennett had spent nearly 12.5 years supporting and helping others integrate with Sage's industry leading construction accounting systems.

In 2013, Bennett accepted a position as the technical product manager for Procore. His first task was working with hh2 to develop a seamless integration with Sage 300 CRE. This led to him formulating the strategy and the infrastructure that has allowed Procore to add new strategic ERP integrations and sustainably implement, support and maintain them. This was a smashing success for both Procore and hh2. Over his four and a half years working for Procore, Bennett served in many capacities including group product manager, director of product management and product strategy leader. Each of these positions provided more opportunities for professional growth as Procore leveraged Bennett's experience to further its success.

After having made the difficult decision to leave Procore to explore other opportunities, Bennett said, "hh2 was the obvious choice. I'm very excited to have the opportunity to leverage the culmination of my knowledge of construction financial processes to deliver the solutions and experiences this industry has been patiently waiting for and honestly deserve. hh2 is undoubtedly a leader in this space and has an impressive technology stack, two things any software product professional should value. hh2 has a fantastic foundation to build upon. As the product leader, I'm most excited to leverage our best-in-class construction financials integration technology to continue to build and grow our high-value strategic partnerships like the ones we have with Sage CRE and Procore.

About hh2 Cloud Services
hh2 Cloud Services was formed in 2004 to create mobile solutions that were built to add mobility to standard construction work flows. Now, hh2 creates a broad range of cloud-based solutions for gathering and reporting on time, entering daily logs, managing human resources processes, accounts payable routing and approval, credit card routing and approval, service management, data aggregation and full featured accounting integration.
